TM471 Suggested Report Format

General Note: Ethics, Legality, and social issues:

- *As per AOU rules and regulations, all students are required to submit their own report work and avoid plagiarism. The AOU has implemented sophisticated techniques for plagiarism detection. You must provide all citations and references in case you use and quote another person's work in your report. You will be penalized for any act of plagiarism as per the AOU's rules and regulations.*
- *Students should be aware of legality issues such as IT laws, local laws, and spectrum licensing issues.*
- *Student should give credit to others who helped them as showed below in the Acknowledgements.*

ABSTRACT

ACKNOWLEDGMENT

DEDICATION (OPTIONAL)

LIST OF TABLES

LIST OF FIGURES

GLOSSARY

TABLE OF CONTENTS

- ***This part you must use Roman Numerals to number the pages***
- ***Page 1 should start from Chapter-1***
- ***The font, size, spacing, titles, sub-titles, paragraph spacing must be consistent, paragraph justification is required***

Chapter 1: Introduction

1.1. Introduction

1.2. Background of the Study

1.3. Project Aims

1.4. Project Objectives

1.4.1 General objectives

1.4.2 Specific objectives

1.5. Problem Definition

1.6. Suggested Solution

1.7. Targeted Customers or Beneficiaries

.8. Project Scope/Delimitation

1.9. Project Schedule

1.10. Summary of Chapters Chapter

Chapter 2: Literature Review

2.1. Introduction

2.2. Search Strategy used

2.3. Review of related literature

2.4. Summary of the literature review

2.5. Compare and contrast (features of the similar systems and proposed system)

Chapter 3: Requirements and Analysis

3.1. Introduction

3.2. Software Development model used

3.3. Requirement Elicitation

3.4. Functional Requirements

3.5. Non-functional Requirements

3.6. Software Requirements (based on your proposed system)

3.7. Hardware Requirements (based on your proposed system)

3.8. Software modelling tools

3.9. Analysis Diagrams At least the following:

- *Use case diagram - Use cases – textual description*
- *Activity diagram/s (specify clearly the activity diagram is representing which use case/s) •*
- *Entity-Relationship diagram*

Chapter 4: Design, Implementation and testing

4.1. Introduction

4.2. The software development model used (for example: agile approach)

4.3. Justification of the model selected

4.4. Advantages of the selected approach

4.5. Alternative model/approach

4.6. Justification for not selecting the alternative approach

4.7. Database design

4.8. User interface design

4.9. Design Diagrams- examples DFD (data flow diagram) Component diagram, etc

4.10. Implementation

Include details about your system implementation

4.11. Testing

Include details about your system testing

Please note the following:

- The design approach chosen must be well explained
- You must list all the specifications of your developed system [show how different from the existing similar systems you have identified in Chapter-2]
- You must briefly explain all Implementation issues
- You must include the various testing strategies with appropriate examples.
- Testing should be according to the scheme presented in the Analysis chapter and should follow some suitable model. Both functional testing and user acceptance testing are appropriate.

Chapter 5: Results and discussion.

The main results of your work should be presented here, together with critical discussion.

The chapter should cover three things (although these would not be used as section headings):

5.1 **Findings** - present all the results (products, experimental findings, theories, etc.) generated during the project.

- *This may also include some off-topic findings that were not expected, or which were side-effects of other explorations.*

5.2 **Goals achieved** - describes the degree to which the findings support the original objectives laid out for the project.

- *The goals may be partially or fully achieved, or exceeded.*
- *Note that reporting of failures to achieve goals is important since a fundamental feature of the assessment procedures is that the processes (how you went about your project) are often as important as the products of the project.*

5.3 **Further work** - describes two things:

- *Firstly, new areas of investigation prompted by developments in this project,*
- *Secondly parts of the current work which were not completed due to time constraints and/or problems encountered.*

Chapter 6 Conclusions.

- The conclusions can be summarised in a fairly short chapter **(2 or 3 pages).**
- This chapter brings together many of the points that you will have made in other chapters, especially in the previous results and discussion chapter.
- **Do not be afraid of repeating some** of your earlier statements here, but only using different wording.

References

Appendices

GENERAL NOTES:

Part A Report (Chapter 1, 2, 3, 4 (Chapter-4 only the Design part)

Length: The body of the report should be between 2500 and 3000 words excluding appendixes

Full Report

Length: The body of the report should be between 8000 and 10000 words excluding appendixes:

Outside of this range should be penalized

You must state the number of words on the report

AOU Plagiarism policy will be strictly applied
